74F756 Octal Inverter Buffer (Open Collector)

74F757 Octal Buffer (Open Collector)

74F760 Octal Buffer (Open Collector)

## FEATURES

- Octal bus interface
- Open collector versions of 74F240, 74F241 and 74F244

TYPE	TYPICAL PROPAGATION DELAY	TYPICAL SUPPLY CURRENT (TOTAL)
74F756	9.0ns	40mA
74F757	9.0ns	45mA
74F760	9.0ns	45mA

## DESCRIPTION

The 74F756, 74F757 and 74F760 are octal buffers that are ideal for driving bus lines of buffer memory address registers. The 74F756 is the open collector version of 74F240, 74F757 is the open collector version of 74F241 and 74F760 is the open collector version of 74F244. These devices feature two Output Enables,  $\overline{OE}a$  and  $\overline{OE}b$  (or  $OEB$  for the 74F757), each controlling four of the outputs.

AC WAVEFORMS

For all waveforms, V<sub>M</sub> = 1.5V.

Waveform 1. Propagation Delay for Inverting Outputs

Waveform 2. Propagation Delay for Non-inverting Outputs

TYPICAL PROPAGATION DELAYS VERSUS LOAD FOR OPEN COLLECTOR OUTPUTS

NOTE:

When using open-collector parts, the value of the pull-up resistor greatly affects the value of the t<sub>PLH</sub>. For example, changing the pull-up resistor value from 500Ω to 100Ω will improve the t<sub>PLH</sub> up to 50% with only slight increase in the t<sub>PHL</sub>. However, if the pull-up resistor is changed, the user must make certain that the total I<sub>OL</sub> current through the resistor and the total I<sub>IL</sub>'s of the receivers do not exceed the I<sub>OL</sub> maximum specification.

## TEST CIRCUIT AND WAVEFORMS

**Test Circuit for Open Collector Outputs**

**DEFINITIONS:**

- $R_L$  = Load resistor; see AC electrical characteristics for value.
- $C_L$  = Load capacitance includes jig and probe capacitance; see AC electrical characteristics for value.
- $R_T$  = Termination resistance should be equal to  $Z_{OUT}$  of pulse generators.

## Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
